Box 2: business process flows

Flows Power Automate includes several types of processes, each designed for a different purpose:
» Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.
» Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.
» Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.
» Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.
» Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.
Box 3: Common Data Model
Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

You have a Power BI report.
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can export data from a visualization in a Power BI report.	○	○
You can show the data behind a visual report on your screen without exporting the data.	○	○
You must export data to view supporting data for a KPI.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report.
Note: Export data from a Power BI dashboard
➤ Choose the Export data icon.
➤ Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data.
➤ Your browser will prompt you to save the file. Once saved, open the .csv file in Excel. Box 2: No
Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel.
Box 3: Yes
A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file.
Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.

What are three possible ways to achieve the goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

A. Create a Power BI workspace and grant coworkers permissions.
B. Publish the dashboard as an app to your coworkers.
C. Export the data into Common Data Service for others to manipulate in Power BI.
D. Export the data to Microsoft Excel for coworkers to import and view in Power BI.
E. Embed reports in your company's internal web portal.

Answer: ABE

Explanation:
A: Basic Sharing for Dashboards and Reports through a workspace is the most common way of sharing the Power BI content. Basic Sharing is very simple and easy to use method. You can simply click on the Share button in the dashboard or report, and then share it with other users.

B: Apps are great sharing method for multiple environment, and best way of sharing for users in production environment.
Power BI App is the solution for multiple environment approach. With Power BI App, your development environment (workspace), and user environment (App) are isolated from each other.
Note: If you are using SharePoint online as a portal for document management and some other reasons already, then consider using Embed in SharePoint Online feature of Power BI reports. This method is secure and you can share the report only with Power BI users you want.
E: Sometimes, you don't need a secure way of sharing, you may search for an easy and free way of sharing, and your content is not confidential or sensitive.
Publish to web is your friend in such situation. This is the only free way of sharing in Power BI, but be aware that this method is not secure.
Publish to web method, gives you an embed code, which you can use in any web pages to embed the Power BI report in it

flow type		Run flow every hour.	Component

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Trigger
A trigger is something that triggers or starts the workflow. It could be a new file uploaded to a document library, a new item created in the list or an email sent to your Inbox – something that will start (kick-off the workflow).
There are two types of triggers:
≫ Automatic trigger is pre-programmed into the workflow based on a certain rule (i.e. new document or item created, email sent, etc.)
≫ Manual Trigger is a trigger initiated by a user. Unlike with automatic trigger above, the workflow will only start when initiated manually by the end user (for example, from the Document Library for a selected file). Manual trigger is only supported for certain types of workflows (i.e. Get feedback from your manager for the selected file)
Box 2: action
An action is something that occurs as a result of the workflow. Box 3: expression
Sometimes users just need to do basic operations like getting the current time, adding numbers together, or replacing a part of a string of text. That's possible inline in any flow action. Microsoft Flow leverages the same Workflow Definition Language used by Azure Logic apps. For new users who are unfamiliar with the expression language, there is an inline help experience that shows how to use each expression as they build out their flow.
Box 4: flow type
There are four different Flow types that you can choose from when starting out. You can create a scheduled flow, automated flow, instant flow, or a business process flow.
